## What models are these results from?

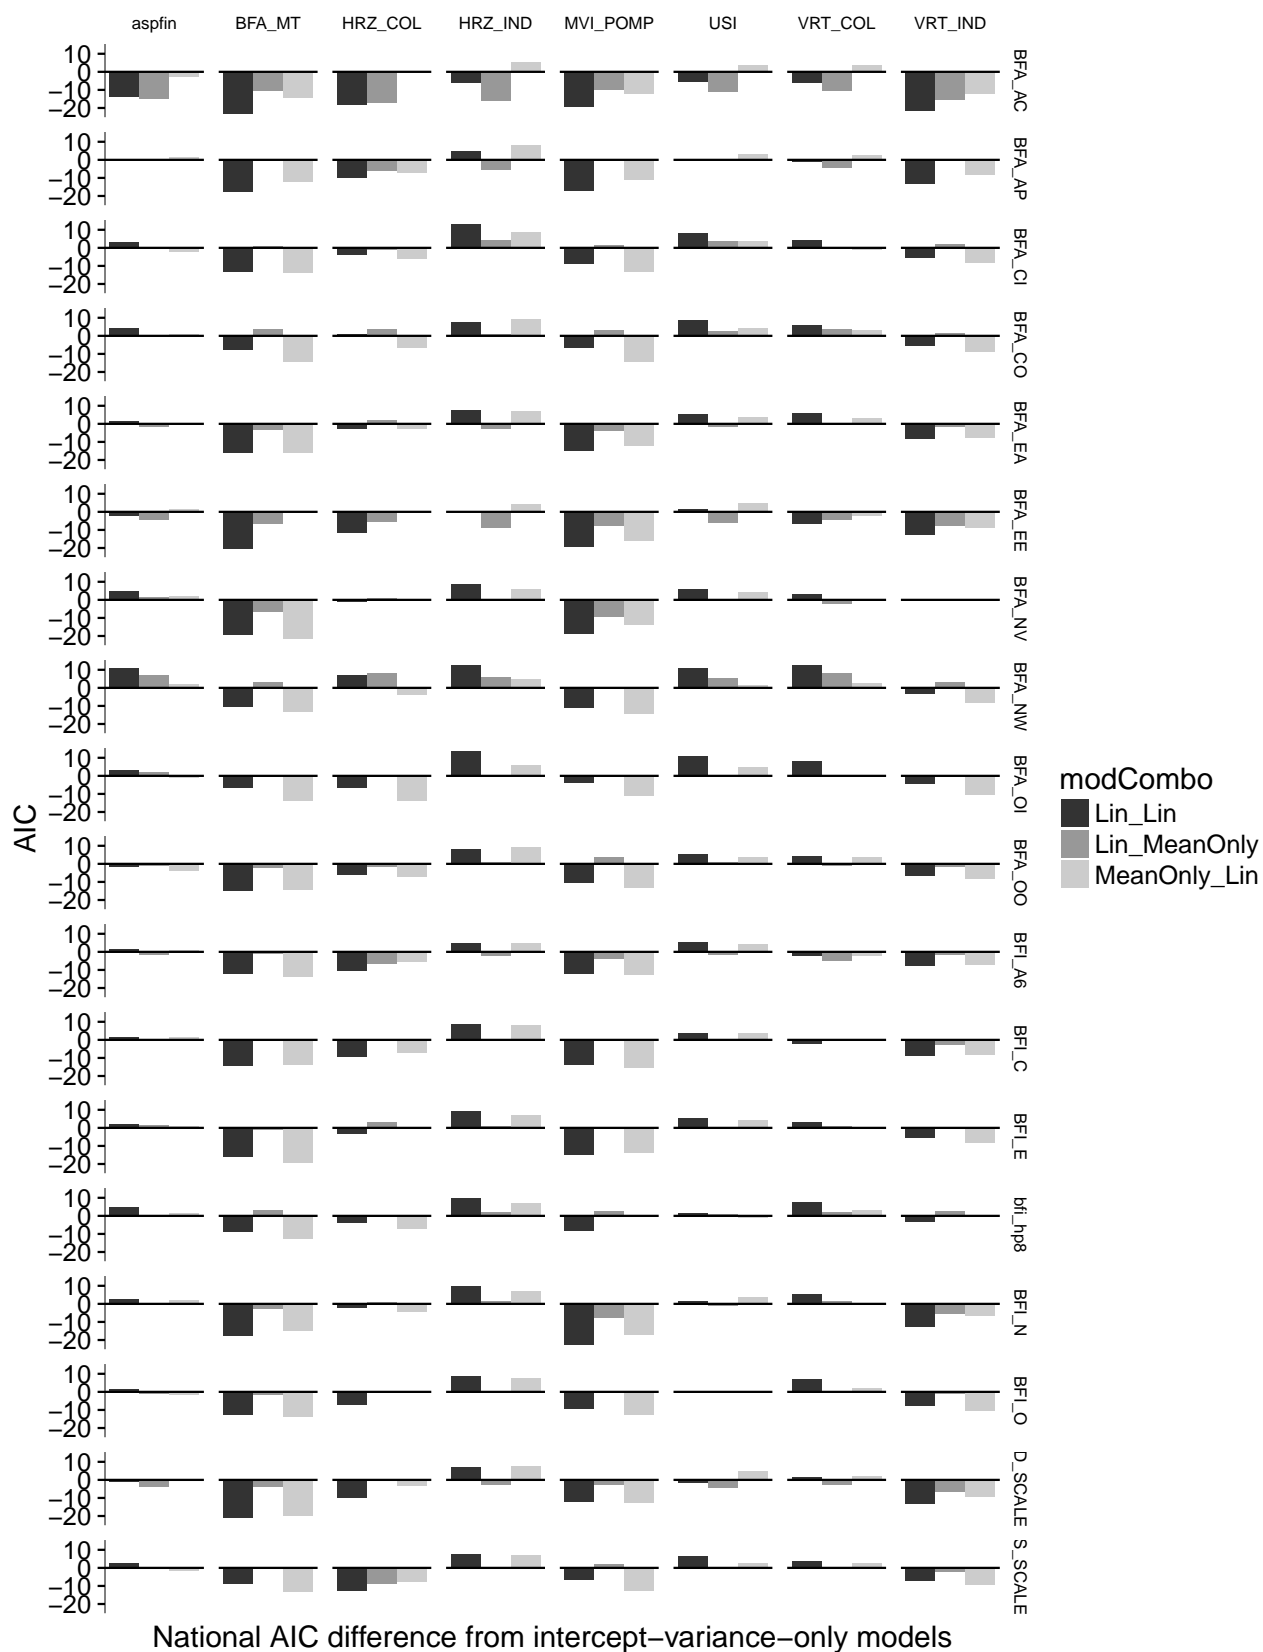

### National

Table 20: Best MLR models, National: All non-lin-lin

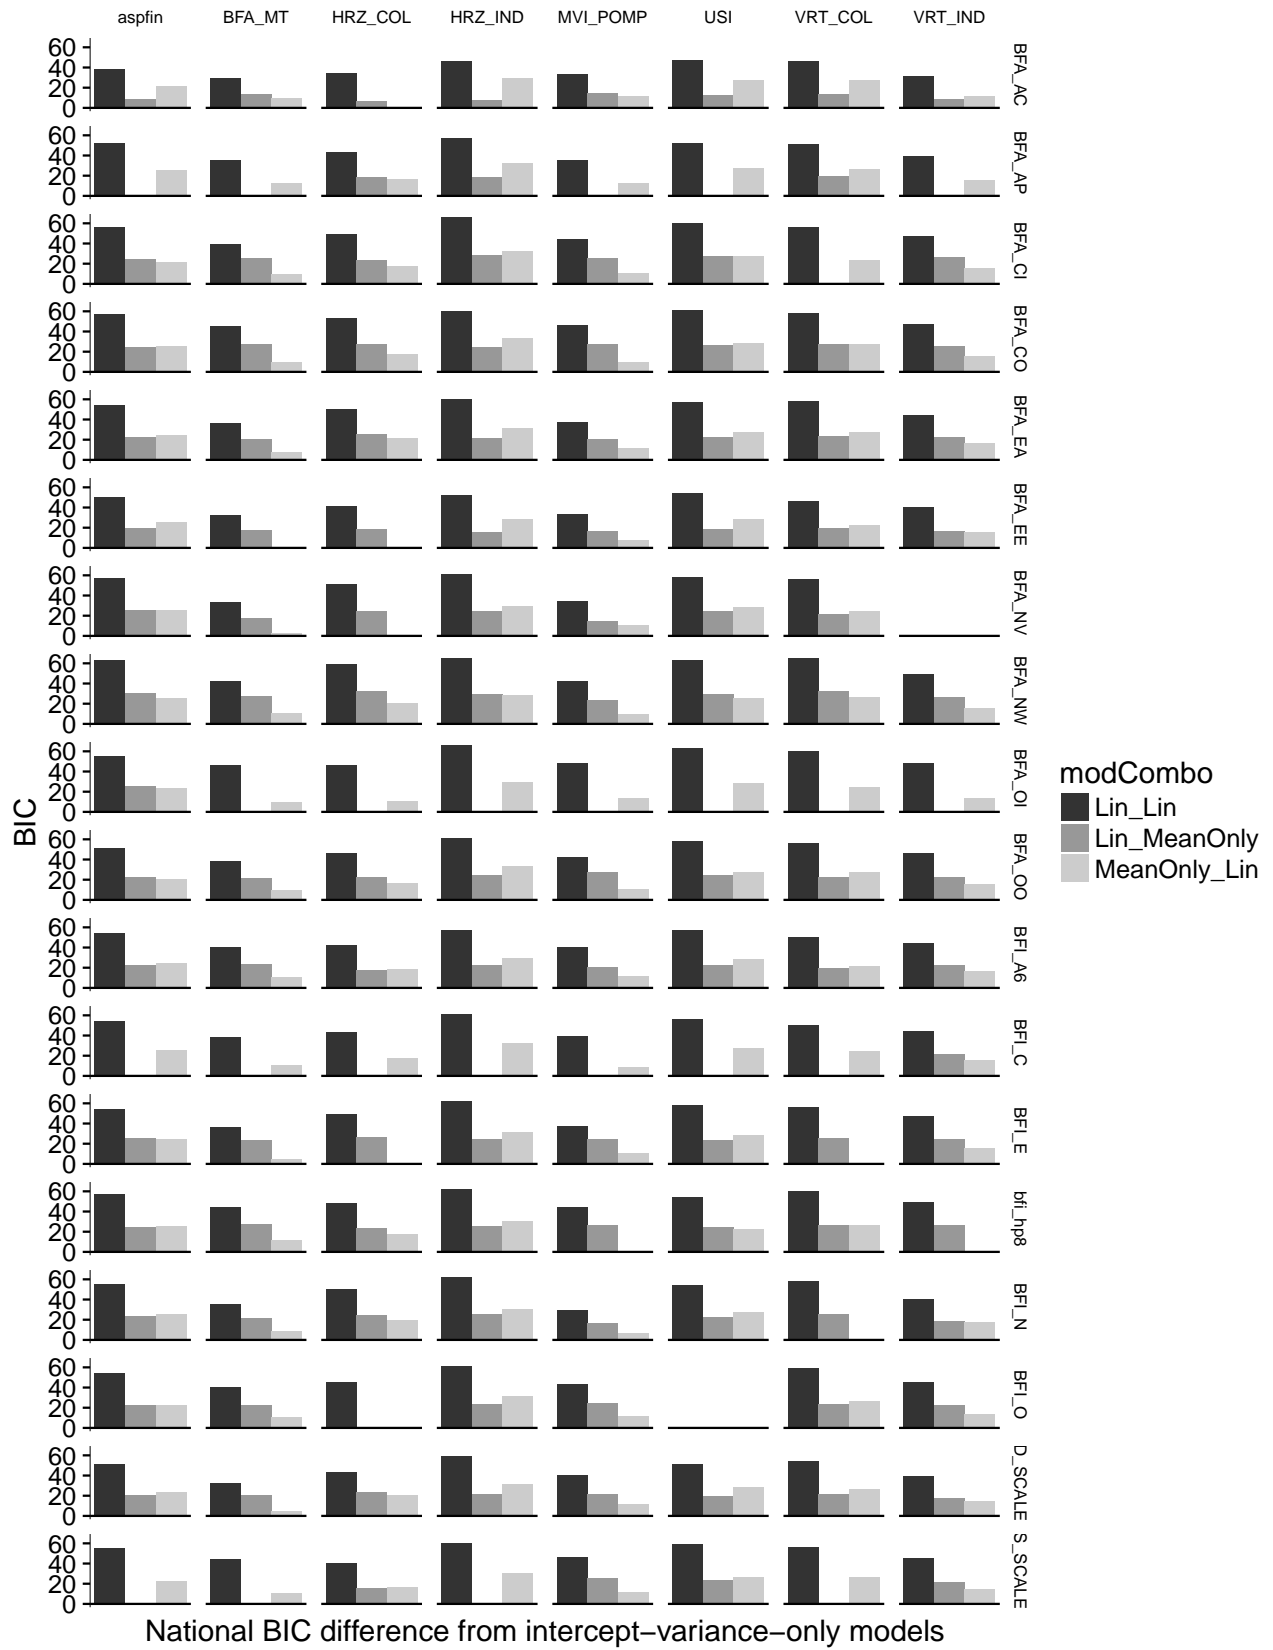

pVar	vVar	modelCombo
bfi_hp8	HRZ_COL	MeanOnly_MeanOnly
I_C	MVI_POMP	MeanOnly_MeanOnly
I_H	MVI_POMP	MeanOnly_MeanOnly

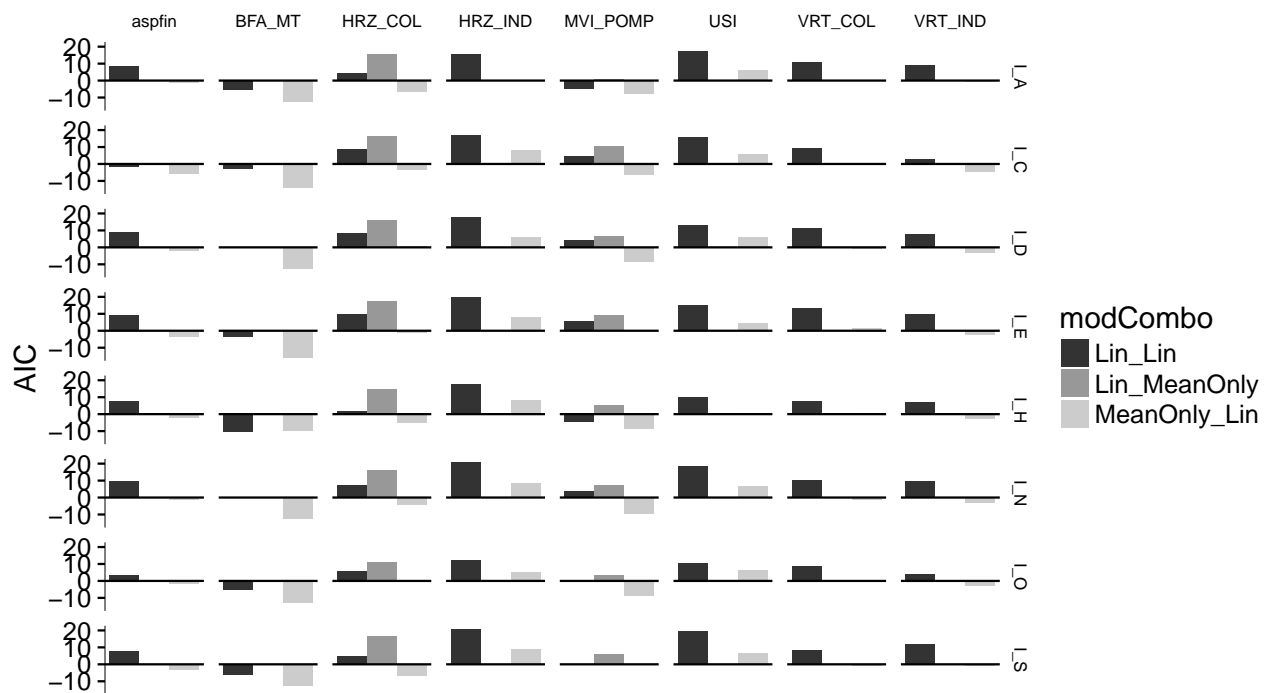

Except for the models in the above table, all models are full linear  $\leftrightarrow$  linear, with free slope variances and corresponding covariances. Slope variance for the Mature Values Index was preferred when paired with informant reports based on univariate model fit. All BFI HP  $\leftrightarrow$  HRZ\_COL models had to fall back to MLF estimators, and thus the simplest model (no linear slope variance) was retained.

Below you can see a comparison of model fit across model types for each combination.

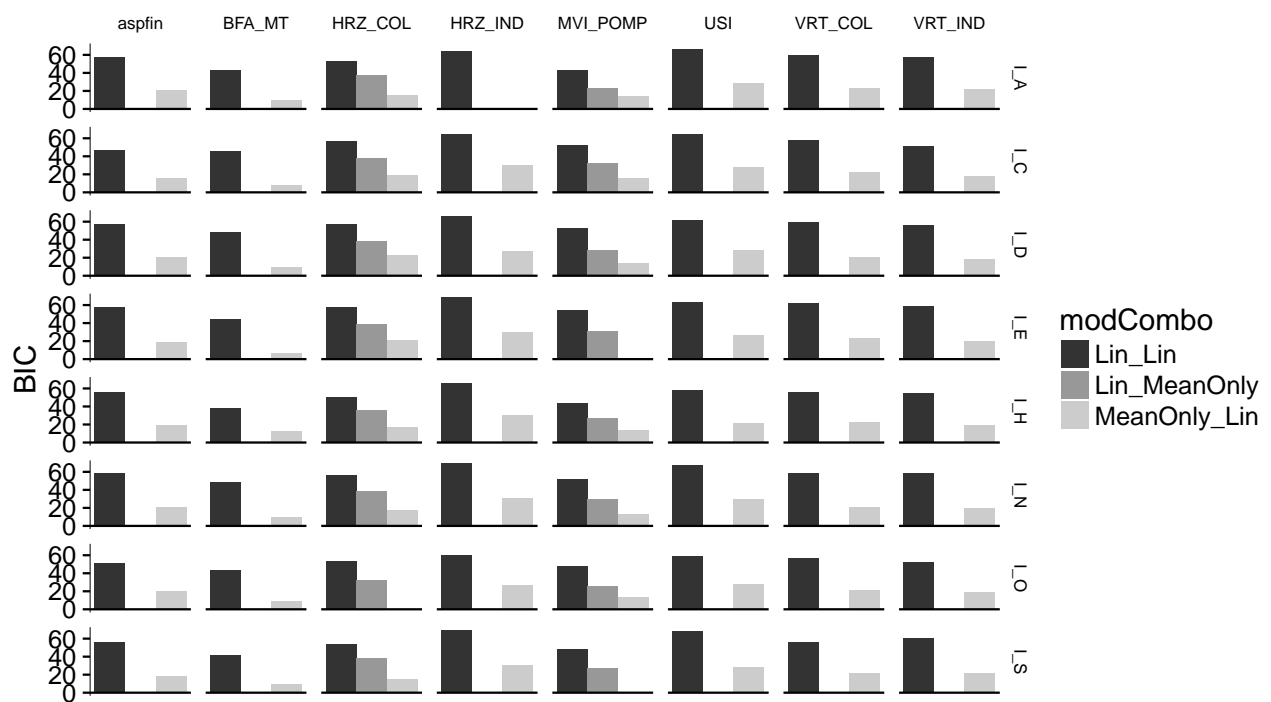

All models are linear  $\leftrightarrow$  linear, with no slope variances.

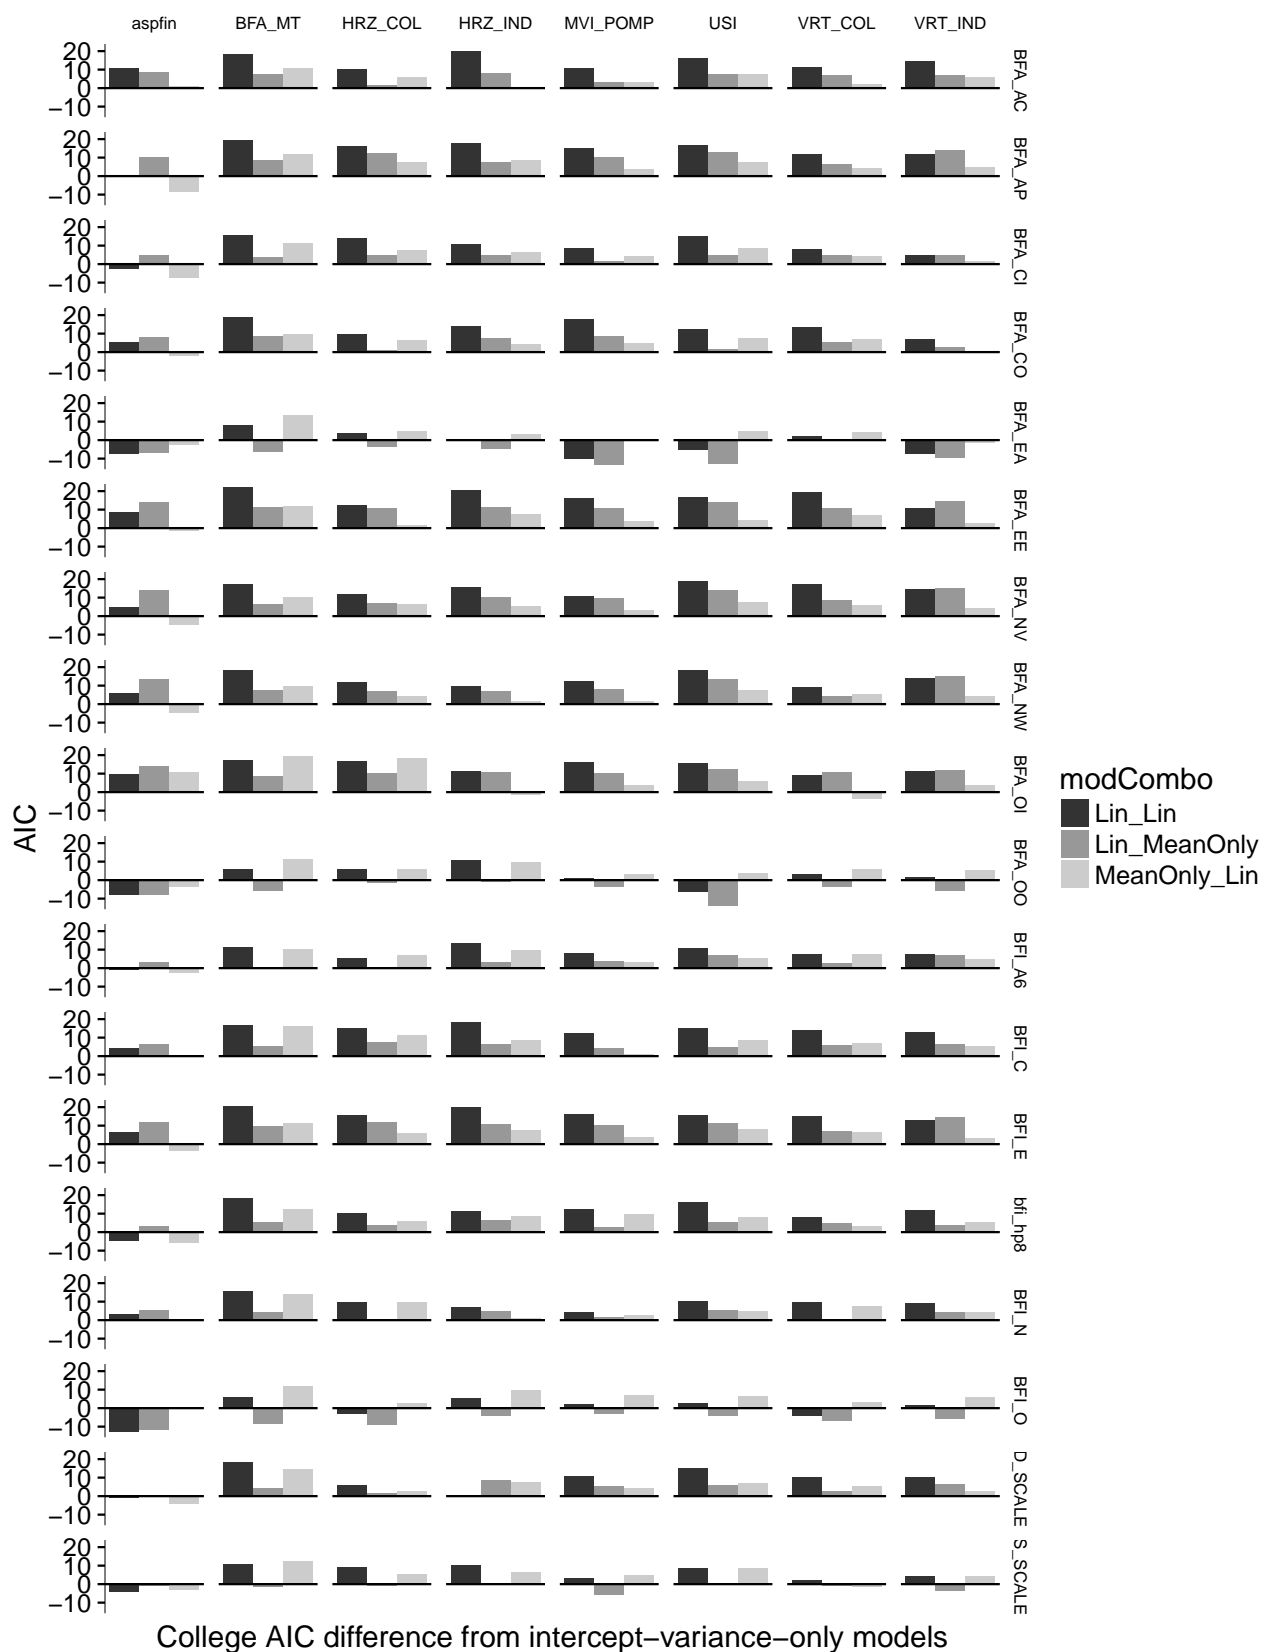

National informant AIC difference from intercept-variance-only models

National informant BIC difference from intercept-variance-only models

## College

All models are linear  $\leftrightarrow$  linear, with no slope variances.
