What models are these results from?

National

Table 20: Best MLR models, National: All non-lin-lin

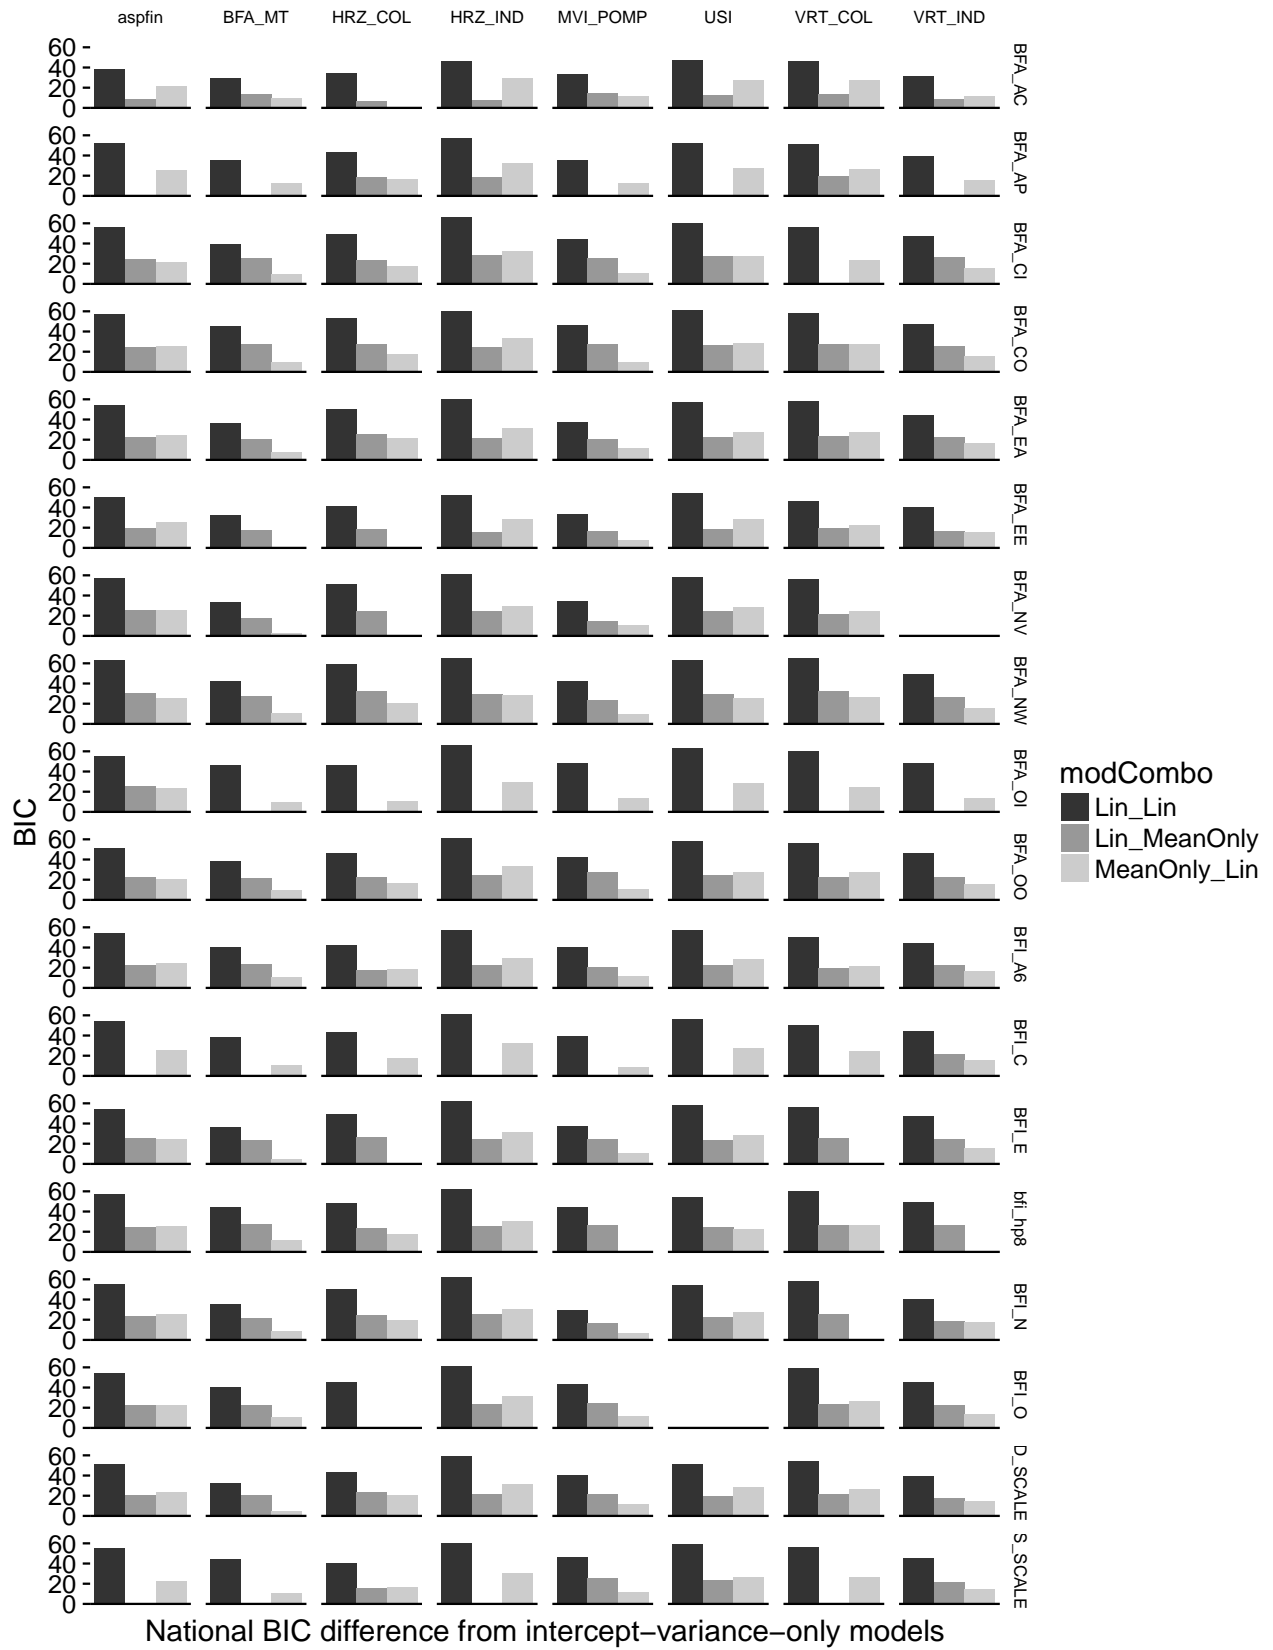

pVar	vVar	modelCombo
bfi_hp8	HRZ_COL	MeanOnly_MeanOnly
I_C	MVI_POMP	MeanOnly_MeanOnly
I_H	MVI_POMP	MeanOnly_MeanOnly

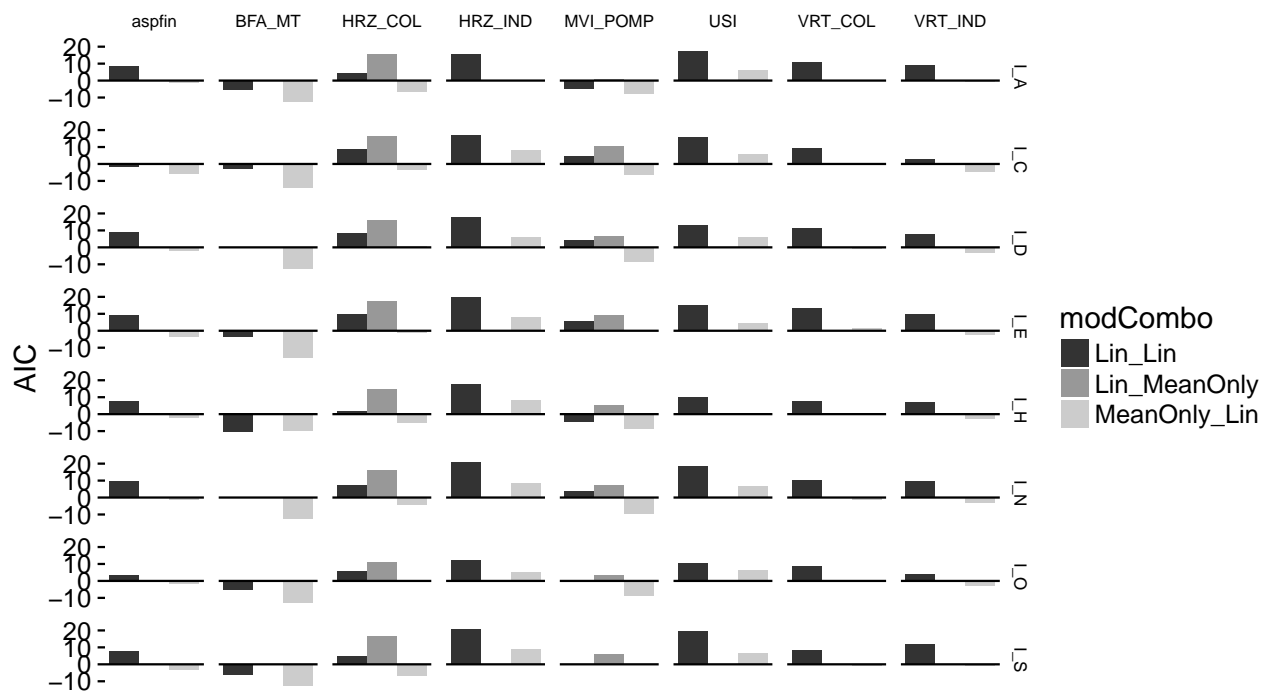

Except for the models in the above table, all models are full linear \leftrightarrow linear, with free slope variances and corresponding covariances. Slope variance for the Mature Values Index was preferred when paired with informant reports based on univariate model fit. All BFI HP \leftrightarrow HRZ_COL models had to fall back to MLF estimators, and thus the simplest model (no linear slope variance) was retained.

Below you can see a comparison of model fit across model types for each combination.

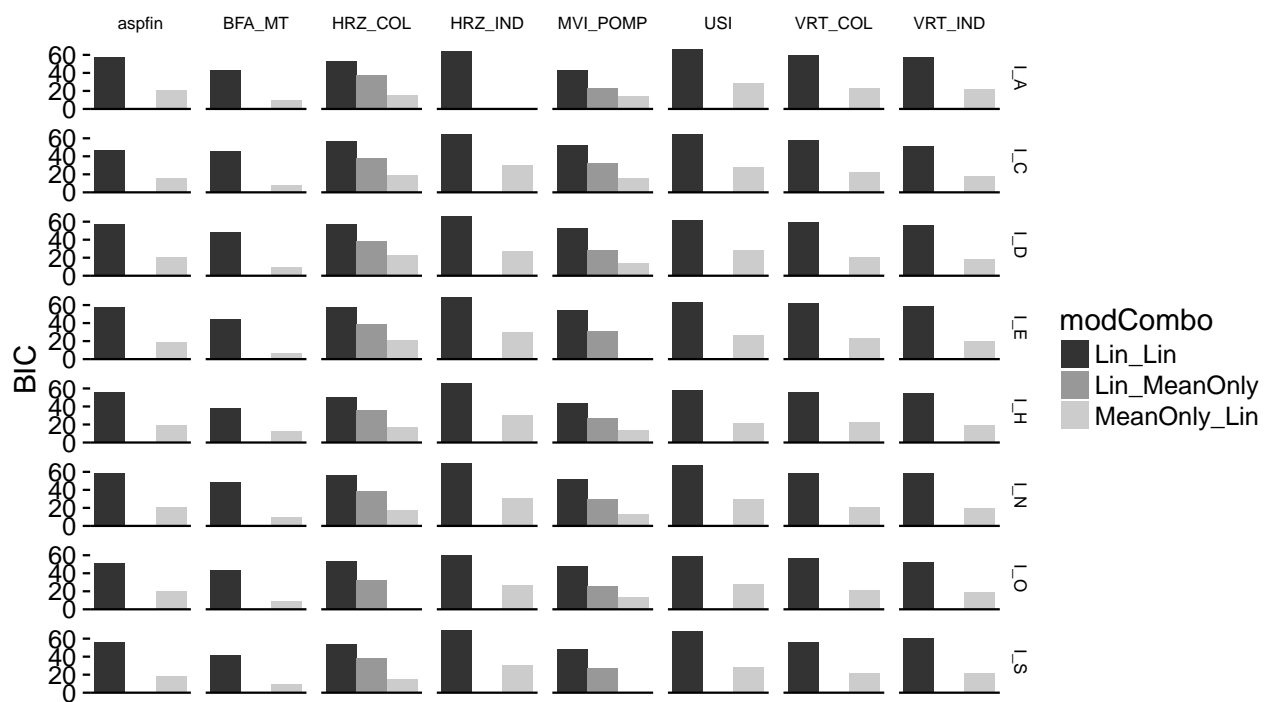

All models are linear \leftrightarrow linear, with no slope variances.

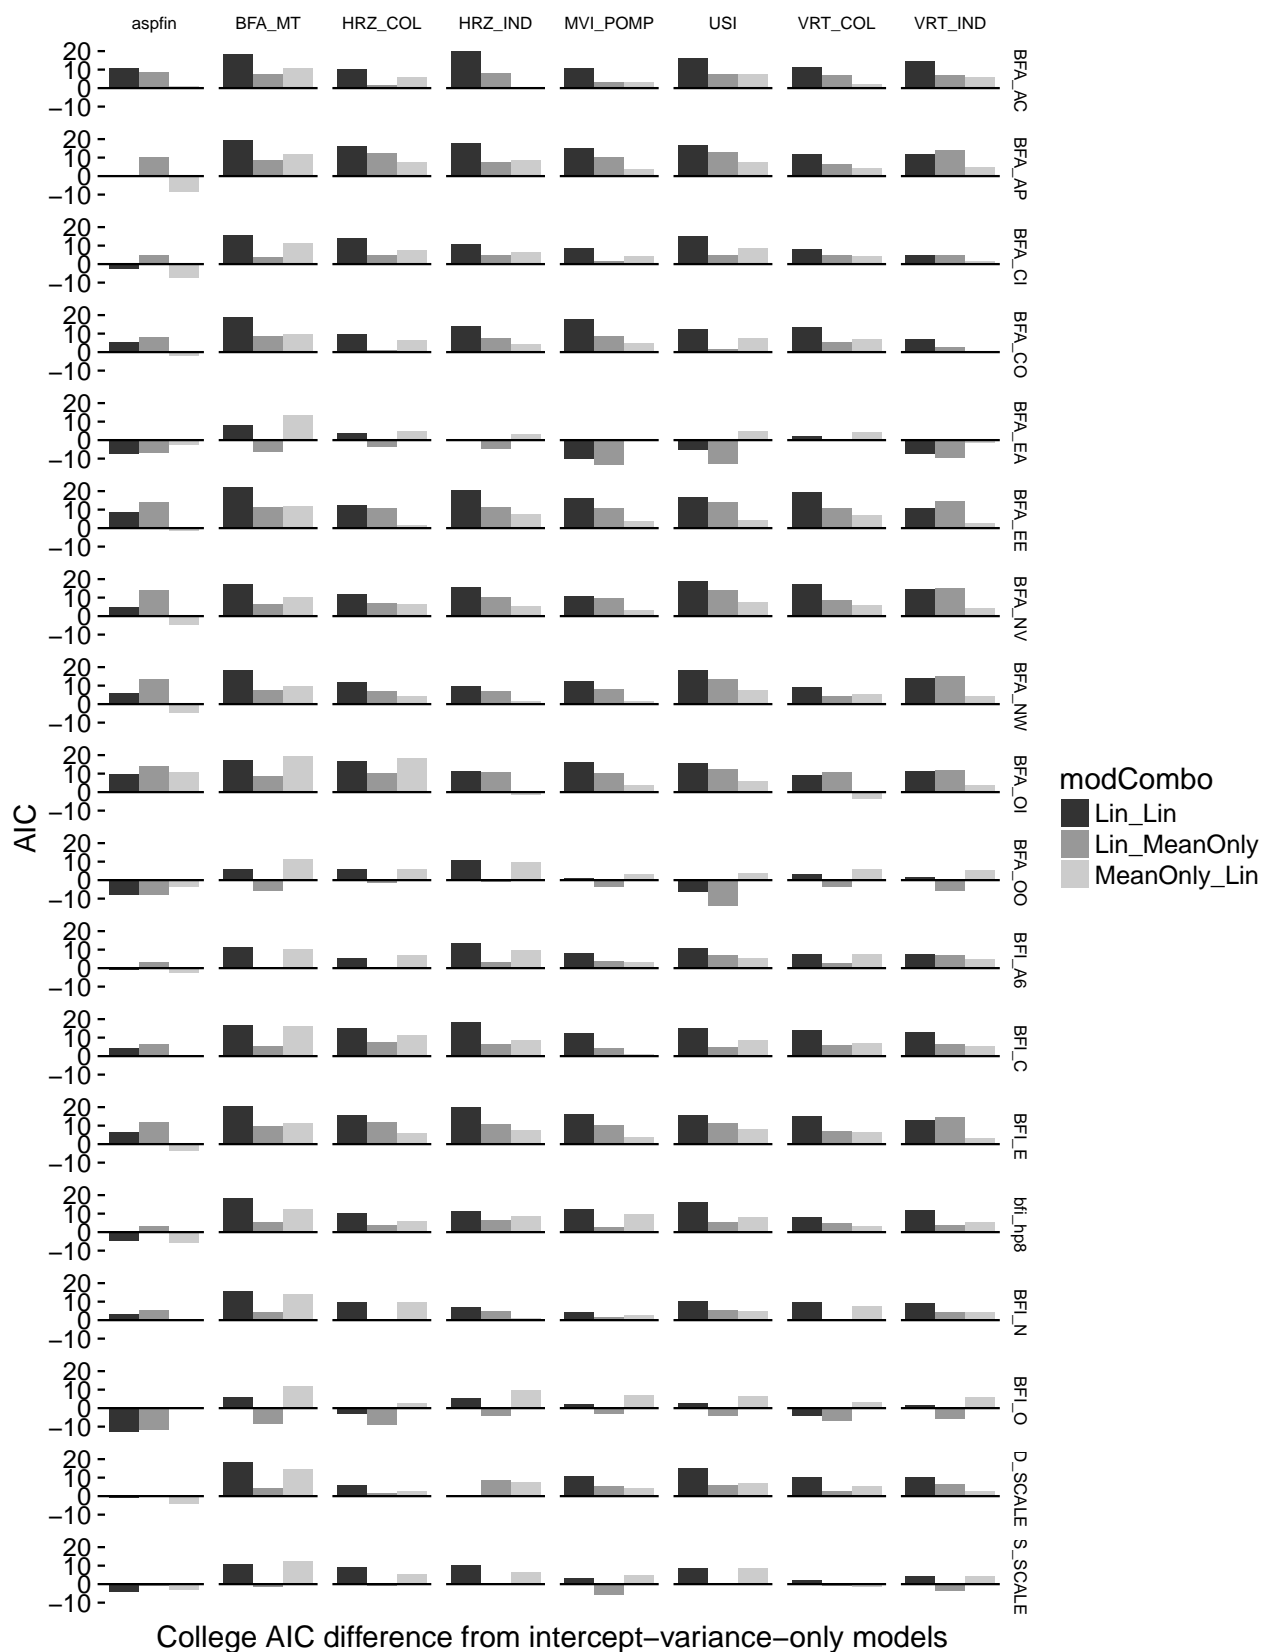

National informant AIC difference from intercept–variance–only models

National informant BIC difference from intercept–variance–only models

College

All models are linear \leftrightarrow linear, with no slope variances.
